

# HOW TO CHOOSE PET TEMPERATURE MONITORS? EZ GUIDE FOR PET PARENTS

Pet Temperature Monitors come in handy and offers you peace of mind. They allow pet travelers, particularly those who RV with their dogs, to Monitor their dog's environment Temperature real-time from anywhere.

Summer and Winter are the two seasons when Pet Temperature Monitors are mostly active, though many Pet parents use them all year round.

In this quick & easy guide, we help you with tips on what to look for in a Pet Temperature Monitor before you buy one.

## Real-Time Monitoring:

This is by far the most important feature.

- Does the device monitor the temperature in **real-time 24/7** and send periodic updates to your mobile phone?
- How often does it send periodic updates?

Monitors that send updates to your phone at least once every **15 minutes** are considered very safe for your pets.

## Real-Time Alerts:

This is another essential thing you need to confirm before choosing the monitor. Real-time alerts mean that when the temperature exceeds or falls below the desired limits, it should immediately alert you via email/text. Choose the monitor that sends alerts up to **5 emails and mobile numbers** and offer in-app alert notifications. Advanced Monitors send you alerts about temperature and RV power loss, low battery, etc.

## Connectivity:

Most inexpensive monitors use your home WiFi to send temperature updates. But if you are RVing and your RV don't have WiFi, then those Monitors are useless.

Choose one with a **Built-in cellular connection**, so you don't have to depend on WiFi. Pet Monitors with 4G Cellular work great by themselves without WiFi.

## Backup Battery:

This is another life-saver in case your RV loses power. Pet Temperature Monitors with a built-in battery offer up to **2 days of backup**, so you don't have to worry about your RV losing power.

Coupled with a "Power Loss" alert and a "low battery alert," you are in great shape. Look for a Monitor that comes with a built-in battery.

## Mobile App:

- Is the Mobile App easy to use?
- Does it have a quick and easy-to-read Dashboard and allow you to set the temperature limits on the go?
- Can you turn off the alerts when not in use?

Some inexpensive Pet Temperature Monitors come with a poor readout that makes them hard to use. Look for a monitor that has a great App and a user-friendly dashboard for updates/alerts.
